Observatory Studies Series

Reform strategies and the movement towards institutional autonomy

Edited by Richard B. Saltman Antonio Durán Hans F.W. Dubois

RESEARCH • DEBATE

 Addressing health workforce challenges

 Balancing pharmaceut policies in Bulgaria

 Pay-for-performance in the former Yugoslav Republic of Macedonia

European Observatory

#### www.healthobservatory.eu

## Governance: conceptual dimensions

- Understanding the new developments in state-society relationships
- Perceiving the processes of steering, coordination and goal-setting through which society is governed nowadays
- Discovering the mixed systems (markets, hierarchies, networks and communities) involved in (public) services delivery.

# Understanding provider governance in health care

# Hospital "Governance"

#### Complex interaction between multiple levels

Multi-dimensional and multi-faceted

#### It incorporates:

- national: policy, regulation (macro)
- *institutional:* strategy (<u>meso</u>)
- internal/clinic: management (micro)

## Hospital Governance framework

Attributes	Before	New Emphasis
Status	Political dependence	Autonomy
Organization	Self-sufficient	Networks & Partnerships
Workforce	Corporatist; trade- unions; Civil service	Various status
Style	Command and control	Steering
Goal	Effectiveness and	Responsiveness
	quality of services	(to users)
Accountability	Upwards	Multiple; ethics &
		standards of conduct
Context	Isolation	Coordination & public
		leadership
Technology	Information	Intelligence
Boundaries	Facility-based	Flexible boundaries

### Serious challenges for hospital management!

No "whim"! Command and control but also traditional managementrelated tools and ways to run the public sector don't work anymore in this context!

# Autonomy

Legitimacy/ Status

Financing

Accountability

**Decision Capacity** 

#### Spain 2011: Hospital autonomy and self-governance

Saltman R, Durán A, Dubois H, 2011, Governing Public Hospitals; Reform strategies and the movement towards institutional autonomy, WHO on behalf of the European Observatory on Health Systems and Policies, pp 241-260

# Conceptual issues in Hospital Semi-Autonomy

- No public hospital is fully autonomous
- Private hospitals (including for-profit), although more autonomous, still have to follow state regulation/expectations
- Semi-autonomy is a good tracer variable for meso-level governance
- Semi-autonomy, typically a formal status
- All hospitals (public and private) fit on a continuum of degrees of semi-autonomy

#### European Continuum of Hospital Governance Strategies

Saltman R, Durán A and Dubois HFW (eds.) *Governing Public Hospitals. Reform strategies and the movement towards institutional autonomy,* Copenhagen: WHO on behalf of the European Observatory on Health Systems and Policies, p 77

#### Autonomy as a defence from political interference

Country	Self-governing models

Saltman RB, Durán A and Dubois HFW (eds.) (2011) Governing Public Hospitals, Reform strategies and the movement towards institutional autonomy, London: WHO on behalf of the European Observatory on Health Systems and Policies

Keeping political interference at bay

Founders/Owners: set up, close, join, and split the hospital + appoint Supervisory Council;

Supervisory Board: nominate Managing Board +approve plans, budgets, investment & structure + oversee activities + sale land & buildings.

Management Board: suggest to Superv. Board + nominate unit managers + set day-to-day rules + decide use of buildings + lead projects.

**Unit managers**: ensure everyday activities + make investment & development proposals + follow rules on use of resources + report

Saltman RB, Durán A and Dubois HFW ,eds. 2011, Governing Public Hospitals, Reform strategies and the movement towards institutional autonomy, London: WHO on behalf of the European Observatory on Health Systems and Policies, p.38

# Hospital Governance: definition

"Processes and tools related to decision making in steering all institutional activity, influencing most aspects of organizational behavior and recognizing the relationships between multiple stakeholders.

Scope: normative values (equity, ethics), results (access, quality, responsiveness and patient safety) + political, financial, managerial as well as daily operational issues."

Saltman RB, Durán A and Dubois HFW (eds.) (2011) Governing Public Hospitals, Reform strategies and the movement towards institutional autonomy, London: WHO on behalf of the European Observatory on Health Systems and Policies, p.38

"Governance of health facilities": several dimensions,

- (i) Effective managerial authority delegated/ assigned to the hospital/facility network, plus
- (ii) Managerial capacity, systems and processes, balanced with
- (iii) Results-oriented external accountability + internal control systems to replace traditional centralized administrative control, supported by
- (iv) Incentives for performance for the health care institution and its leading team.

# Thank you very much
